## FORMULAS FOR POOL CAPACITY

$\mathrm{L}=$ length $\quad \mathrm{W}=$ width $\quad \mathrm{V}=$ volume $\quad \mathrm{D}=$ depth
$\mathrm{r}=$ radius (half of the diameter of a circle)
$\pi=$ (pi) 3.14 (a factor used in calculations with circles)

## SURFACE AREA

Rectangular pool $=\mathrm{L} \times \mathrm{W}$
Circular pool $=r^{2} \mathrm{x} \pi$
Right triangle $=(\mathrm{L} \times \mathrm{W}) \div 2$

## AVERAGE DEPTH

For constant slope: [D (minimum) + D (maximum)] $\div 2$ = AVERAGE DEPTH
Note: For multi-depth pools calculate the volume in sections of constant slope and add them together.

CUBIC FEET OF VOLUME (surface area times average depth)
Rectangular pool $\mathrm{V}=\mathrm{L} \times \mathrm{W} \times \mathrm{D}$
Circular pool $\quad V=r^{2} \times \pi \times D$
POOL GALLONAGE IN CUBIC FEET (cubic foot of water $=7.5$ gallons)
Rectangular pool gallons $=\mathrm{L} \times \mathrm{W} \times \mathrm{D} \times 7.5$
Circular pool gallons $=\mathrm{r}^{2} \mathrm{x} \pi \times \mathrm{D} \times 7.5$

## FLOW RATE/TURNOVER RATES

SPAS: Required turnover every 30 minutes therefore required flow rate is:
Gallons $\div 30$ minutes $=$ minimum $(\mathrm{min})$ flow rate in gallons per minute (gpm)
LIMITED USE POOLS: Required turnover at least every 8 hours ( $8 \times 60 \mathrm{~min}=480 \mathrm{~min}$ )
Gallons $\div 480$ minutes $=$ min flow rate in gpm
GENERAL USE, LTD USE OVER 2000 SQ FT SURFACE AREA AND ATHLETIC
CLUB POOLS: Required turnover at least every 6 hours ( $6 \times 60 \mathrm{~min}=360 \mathrm{~min}$ )
Gallons $\div 360$ minutes $=$ min flow rate in gpm
